Lintec Loading Bridges

Lintec loading bridges and truck ramps are easy, safe and quick to use. We are here to find best solution for your business. All of our products are designed for heavy use in all weather conditions.

All ramps and bridges are manufactured in Finland.

Why to choose LINTEC-Mobile Loading Bridge:

1. Construction
Strong steel construction made out of high quality steel. Components are welded all around to make strong construction. This also protects construction from corrosion.
2. Profile
Curved driving profile makes the loading/unloading smoother, easier, faster and safer.
3. Driving surface
Customer can choose from two options, based on their requirements:
(available only on Lintec-bridges)
 - hot-galvanized grating + expament mesh gives extra good grip
 - hot-galvanized antislip grating
4. Tyres
Solid tyres - no tyre failures, ensures working safety. Tyres with large diameter makes it easy to move even on uneven ground.
5. Safety legs
Safety legs will prevent bridge for falling down in case of trailer moves and/or locking chains are not used correctly.
6. Locking chains
Strong, adjustable locking chains to secure the bridge to the vehicle.
7. Guidance for the vehichle driver
Guiding rods on both sides of the bridge makes it easy for the driver to reverse on the bridge.
8. Surface finish
Painted in blue (RAL 5003) with high quality 2-component polyurethane paint. On request also available in different colors.

In addition to our standard products we also design and manufacture loading solutions based on customer requests.
